

## Airvenue View

The Airvenue View NMS is a comprehensive software package that allows network operators to easily configure, monitor and manage a complete network built with any combination of BA200 wireless multi-service switch routers, BA100 wireless multi-service nodes, or BA50c wireless mesh cluster nodes. The View NMS is designed to ensure these networks are easy to install and maintain, which maximizes utility while minimizing cost to both end users and network administrators.

Designed as a robust, carrier-grade product, the Airvenue View NMS comprises a server application and a series of alternate clients that can be used in real time to remotely monitor and manage a complete spectrum of network surveillance and provisioning tools. Network managers can use the View NMS's intuitive graphical interface to access management data, and manage individual nodes and the logical elements of their Airvenue network. The software allows for network element management over Ethernet or over WiFi. It can also be used for network configuration or restoration.

Airvenue's wireless broadband products are being used in an increasing number of critical communications deployments. View NMS makes the Airvenue products easier to install and maintain. Network managers now have a single console to manage the whole system which ensures these networks stay up and running at peak capacity, saving time and money.

The comprehensive set of management features offered by the View NMS includes auto-discovery, fault, configuration and performance management as well as a full suite of security tools.

An entire Airvenue wide-area wireless broadband network can be managed from a single workstation running the Airvenue View NMS client and server software. The client software can also be run from remote computers, enabling network management to occur from anywhere with an Internet connection. The View NMS can scale to handle networks of any size by adding servers as required.

All Airvenue hardware shipments now include the View NMS Software with a thirty day trial license.
